

## **EPA WaterSense Labeled Smart Irrigation Controllers**

Residential outdoor water use in our areas doubles and sometimes triples during the summer months mainly because of landscape irrigation. Experts estimate that as much as 50 percent of this water is wasted due to overwatering caused by inefficiencies in irrigation methods and systems.

To help our customers be more efficient with their outdoor water use the CRWP offers up to [\\$100 rebate](#) when you purchase and install a WaterSense, weather-based controller: “Smart” irrigation control technology can save you water, time, and money when compared to standard models.

### Smart Watering

WaterSense labeled irrigation controllers, which act like a thermostat for your sprinkler system by telling it when to turn on and off, use local weather and landscape conditions to tailor watering schedules to actual conditions on the site. Instead of irrigating using a controller with a clock and a preset schedule, WaterSense labeled controllers allow watering schedules to better match plants’ water needs. With proper installation, programming, and maintenance, homeowners and businesses can use WaterSense labeled controllers instead of standard clock-timer controllers on their existing systems, and no longer worry about wasted water.

### WaterSense Savings

The EPA estimates replacing a standard clock timer with a WaterSense labeled irrigation controller can save an average home nearly 7,600 gallons of water annually. If every home in the United States with an automatic irrigation system installed and properly operated a WaterSense labeled irrigation controller, we could save \$1 billion in water costs and 100 billion gallons of water across the country annually from not overwatering lawns and landscapes. That’s equal to the annual household water needs of nearly 1.2 million average American homes.

### Look for the WaterSense Label!

To earn the WaterSense label, landscape irrigation controllers must be able to adequately meet the watering needs of a landscape without overwatering. As with all other WaterSense labeled products, WaterSense labeled controllers are third-party certified to ensure that they meet the WaterSense criteria for efficiency and performance.
