## Help Protect the Clackamas River

### Smarter Landscaping

#### Reduce Chemicals & Fertilizers

Reduce or eliminate the use of herbicides and pesticides by pulling weeds manually or mechanically. If you need to spray, avoid rainy or windy days. When applying granular fertilizer, sweep up the excess so it doesn't go to the river when it rains.

#### Stormwater Management

When water on the ground enters the soil, that's called infiltration. To reduce the amount of chemicals entering our rivers and streams, slow down your stormwater and allow for infiltration.

**Go the extra mile:** Install a rain garden or infiltration basin to treat the stormwater on-site.

#### Water Saving Plants

Replace turf with native or drought-tolerant plants. If you keep a lawn, aerate to reduce runoff and allow the water to infiltrate into the soil.

#### Efficient Irrigation

Hire a qualified irrigation professional to help reduce overspray, prevent runoff, and install water saving devices, like Smart Controllers.

#### “Eco” Lawns

Utilize lawns with multiple plant varieties to save water and reduce chemical use. When properly maintained, eco lawns are an attractive alternative to traditional lawns.

*Nearly 300,000 people rely on the Clackamas River for drinking water. Please follow these common sense practices to protect our drinking water and improve the health of the river.*

# Chemical & Waste Storage: Manage Storage Areas

To limit chemical discharges and reduce waste on your property, follow these best practices:

1. **Sort and properly dispose** of unneeded chemicals, equipment and waste.
2. **Cover waste** stored outside, especially chemicals, scrap metal, and tires.
3. **Add secondary containment** for tanks & drums over 50 gallons.

## Report Spills

If you become aware of a significant spill or inappropriate discharge of wastewater into a storm sewer system, contact Clackamas County Water Environment Services (WES) immediately at 503-742-4567 from 7:30 am-5:30 pm Monday through Thursday. After hours, call the county's dispatch center 503-655-8211 (non-emergency number) or 911 (hazard/emergency), and ask the dispatcher to notify WES.

## Spill Kits & Plans

Place labeled spill kits where liquids are stored or transferred. Post a spill response plan outlining what to do in case of a spill. Contact [fgilliland@pprc.org](mailto:fgilliland@pprc.org) to receive a free spill kit and sample spill plan.

## Please try to avoid washing vehicles

Storm water systems in this area drain to the Clackamas River. **Avoid washing vehicles or equipment in parking lots or streets.** Use a commercial car wash that recycles water.

To learn more, contact Frances Gilliland with the Pollution Prevention Resource Center at [fgilliland@pprc.org](mailto:fgilliland@pprc.org). Visit [www.ecobiz.org/find-an-ecobiz](http://www.ecobiz.org/find-an-ecobiz) to find Eco-friendly landscapers.
